Abstract. Latin America (LA) is formed by 33 countries: Antigua and Barbuda, Argentina (AR), Bahamas, Barbados, Belize, Bolivia (BO), Brazil (BR), Chile (CH), Colombia (CO), Commonwealth of Dominica, Costa Rica, Cuba, Dominican Republic, Ecuador, El Salvador, Granada, Guatemala, Guyana, Haiti, Honduras, Jamaica, Mexico, Nicaragua, Panama, Paraguay (PA), Peru (PE), Saint Kitts, Saint Vincent and the Grenadines, Santa Lucia, Suriname, Trinidad and Tobago, Uruguay, and Venezuela. Supercritical fluids have found applications as reported by scientist from these countries. Therefore, in this work, a review of the Latin-America scientific production in the field of supercritical fluid is presented. A search was done using the term ‘supercritical fluid*’ and requiring the presence of one of the 33 countries listed above in the address field. In the past 7 years (2006 – 2013) 394 papers were published in Journals indexed in ISI Web of Knowledge data basis; in the past 3 years (2010 – 2013) as many as 191 papers were published with the participation of Latin-American scientists. This is more than twice the production of South American countries in the 5 years period comprised from 1999 – 2003: 82 papers from South American countries were published in journals indexed in the Web of Science data basis. Of these, 26 papers were related to the use of SCF as an analytical tool. Supercritical extraction from a variety of vegetable raw material contributed with 38 papers and SFE applied to the petroleum industry added 2 papers to the field. Reactions contributed with 3 publications while thermodynamics and fundamental studies were responsible for 13 publications. A compilation done in 2008 of papers published by Latin-America scientist showed that extractions, thermodynamics, reactions, analytical applications, and so on are among the applications of supercritical fluids; the leading applications were related to extraction of bioactive compounds from a variety of biological matrices. New applications of supercritical fluids were reported in literature by Latin-American scientists such as polymerization reactions, hydrolyzes of bioresidues, enzymatic reactions, gas sensors, micronization and particle formation to mention only few of them.

Keywords: Supercritical fluids, SFE, polymerization reactions, hydrolyzes of bioresidues, enzymatic reactions, gas sensors, micronization, particle formation.

1. Introduction

Researches done in Latin America have been responsible for 2.5% of the worldwide publications in supercritical technology area until 2010. In the past three years (2010-2013), the efforts done by the Latin-American scientists and the new applications of supercritical fluids expanded the Latin America contribution up to 4.8% of the worldwide publications. To evaluate the importance of processes involving supercritical fluids in obtaining value-added products, the investigations performed in the related countries were classified into nine groups: extraction, analytical applications, fundamental and thermodynamic studies, energy applications, reactions in supercritical fluids, materials and micronization, review and perspectives, petroleum applications and economics. This classification and the participation of six countries (Argentina, Brazil, Chile, Colombia, México and Uruguay) are presented in Table 1.

Table 1. Summary of the studies developed in Latin America from 2010-2013

Country	Group of study	Article Title	Year	Ref.
ARGENTINA	Analytical applications	Sorption and diffusion of compressed carbon dioxide in polycaprolactone for the development of porous scaffolds	2012	[1]
		Proton transfer from 2-naphthol to aliphatic amines in supercritical CO ₂	2011	[2]
	Energy applications	Ketalization of glycerol to solketal in supercritical acetone	2011	[3]
	Fundamental & thermodynamic studies	Fractionation of essential oils with biocidal activity using supercritical CO ₂ -experiments and modeling	2011	[4]
		Critical effects on attractive solutes in binary liquid mixtures close to their consolute point: a new experimental strategy	2011	[5]
		AVA seismic reflectivity analysis in carbon dioxide accumulations: sensitivity to CO ₂ phase and saturation	2011	[6]
	Materials and micronization	Computation of solid-fluid-fluid equilibria for binary asymmetric mixtures in wide ranges of conditions	2011	[7]
		Equation of state modeling of the phase equilibria of asymmetric CO ₂ + n-alkane binary systems using mixing rules cubic with respect to mole fraction	2010	[8]
		Near-critical and supercritical dilute solutions viewed from macroscopic and molecular-scale perspectives	2010	[9]
	Reactions in supercritical fluids	Experimental cloud points for polybutadiene plus light solvent and polyethylene plus light solvent systems at high pressure	2010	[10]
		Isochoric lines and determination of phase transitions in supercritical reactors	2010	[11]
	Review and perspectives	Precipitation and encapsulation of rosemary antioxidants by supercritical antisolvent process	2012	[12]
		Supercritical CO ₂ fractionation of rosemary ethanolic oleoresins as a method to improve carnosic acid recovery	2011	[13]
BRAZIL	Analytical applications	Grafting of styrene onto polyethylene in near critical media	2012	[14]
		Optimizing design in open channel	2010	[15]
		Single laboratory validation of a SPE method for the determination of PAHs in edible oils by GC-MS	2012	[16]
		Supercritical adsorption of buriti oil (<i>Mauritia flexuosa</i> Mart.) in gamma-alumina: A methodology for the enriching of anti-oxidants	2012	[17]
		Effects of supercritical carbon dioxide on waste banana peels for heavy metal removal	2011	[18]
	SFE from <i>Bidens pilosa</i> Linne to obtain extracts rich in cytotoxic polyacetylenes with antitumor activity	SFE from <i>Bidens pilosa</i> Linne to obtain extracts rich in cytotoxic polyacetylenes with antitumor activity	2011	[19]
		Biological activities of <i>Solanum paludosum</i> Moric. extracts obtained by maceration and supercritical fluid extraction	2011	[20]
		Supercritical carbon dioxide selectivity to fractionate phenolic compounds from the dry ethanolic extract of propolis	2010	[21]

	Economics	Supercritical anti-solvent precipitation of carotenoid fraction from pink shrimp residue: Effect of operational conditions on encapsulation efficiency	2012	[22]
		Manufacturing cost of supercritical-extracted oils and carotenoids from amazonian plants	2010	[23]
Energy applications		Preliminary studies on advanced power generation based on combined cycle using a single high-pressure fluidized bed boiler and consuming sugar-cane bagasse	2012	[24]
		Sustainable energy: A review of gasification technologies	2012	[25]
BRAZIL	Extraction	Radical-scavenging activity of extracts from <i>Cordia verbenacea</i> DC obtained by different methods	2011	[26]
		Supercritical extraction from vinification residues: Fatty acids, alpha-tocopherol, and phenolic compounds in the oil seeds from different varieties of grape	2012	[27]
		Supercritical extraction of linseed oil: economical viability and modeling extraction curves	2013	[28]
		Extracts from the leaves of <i>Piper pescatorum</i> (Trel. Yunc.) obtained by supercritical extraction of with CO ₂ , employing ethanol and methanol as co-solvents	2013	[29]
		Extraction from striped weakfish (<i>Cynoscion striatus</i>) wastes with pressurized CO ₂ : Global yield, composition, kinetics and cost estimation	2012	[30]
		Defatting of annatto seeds using supercritical carbon dioxide as a pretreatment for the production of bixin: experimental, modeling and economic evaluation of the process	2012	[31]
		Extraction of <i>Mentha spicata</i> L. Volatile compounds: Evaluation of process parameters and extract composition	2012	[32]
		Supercritical fluid extraction from spent coffee grounds and coffee husks: Antioxidant activity and effect of operational variables on extract composition	2012	[33]
		HPLC analysis of supercritical carbon dioxide and compressed propane extracts from <i>Piper amalago</i> L. with antileishmanial activity	2012	[34]
		Extraction, fatty acid profile and antioxidant activity of sesame extract (<i>Sesamum Indicum</i> L.)	2012	[35]
		Characteristics of the extract of <i>Litopenaeus vannamei</i> shrimp obtained from the cephalothorax using pressurized CO ₂	2012	[36]
		HPLC analysis and antileishmanial activity of supercritical fluids extracts from <i>Piper amalago</i> L	2012	[37]
		Supercritical fluid extraction of hernandulcin from <i>Lippia dulcis</i> Trev	2012	[38]
		Extraction of Mucuna seed oil using supercritical carbon dioxide to increase the concentration of L-Dopa in the defatted meal	2012	[39]
		Supercritical fluid extraction of <i>Agaricus brasiliensis</i> : Antioxidant and antimicrobial activities	2012	[40]
		Supercritical fluid extraction from guava (<i>Psidium guajava</i>) leaves: global yield, composition and kinetic data	2012	[41]

2. Summary of the scientific investigations

Figure 1 presents a description of supercritical technology scenario in Latin America. The studies developed in the past 3 years represent 30% of the total studies done in Latin America along the time. Some research teams, mainly in Argentina, Brazil, Chile, Colombia and Mexico, are recently focusing in promising sub-areas, such as: the analysis of target compounds by supercritical fluid chromatography, use of supercritical fluids to hydrolyze biomass for sugar production that can be utilized for second generation ethanol production, application of compressed fluids in bioprocess area for evaluating the enzymes stability, for instance, and the formation of micro and nano particles of functional pigments using supercritical CO₂.

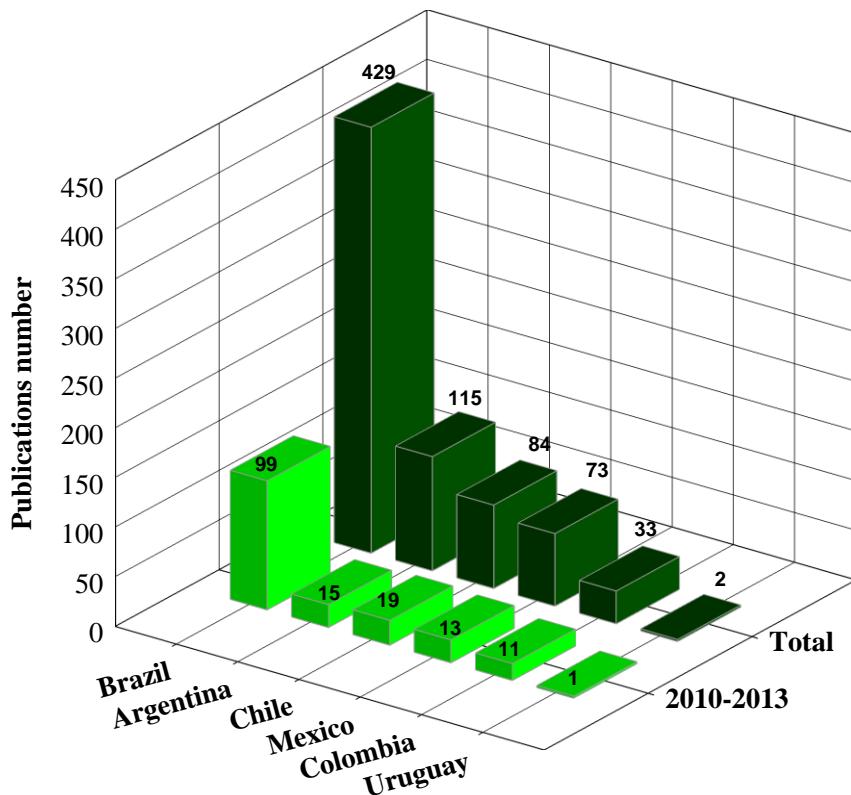

Figure 1. Overview of scientific papers dealing with supercritical fluids performed in Latin America.

3. Patents survey

A search of patents inserting the term ‘supercritical fluid*’ in Derwent Innovations Index, at ISI Web of Knowledge data basis, returned a content of 5,632 patents. However, only 2 patents were found addressed in one of the 33 countries belonging to Latin America. Indeed, the patents are registered in local data basis, as is the case of Brazil where the patents are deposited at INPI (Brazilian National Institute of Industrial Property). The 2 patents found at ISI Web of Knowledge data basis were invented in Colombia. The invention WO2012066389 [158] is a novel process for the production of aqueous suspensions of micro and nanoparticles of calcium salts smaller than 10 µm using critical, subcritical and supercritical carbon dioxide. This property of the fluid increases the solubility of the calcium salt, which allows enriching nutritional, nutraceutical and pharmaceutical beverages with calcium salts. The invention US2011237857 [159] is a process for the destruction of toxic residues via oxidation in the presence of water and oxygen developed in homogeneous supercritical condition of 647 K and 22 MPa. The mobile unit proposed of processing is composed of a reactor, which includes pressurization, reaction, cooling, depressurization and sampling zones for the destruction of toxic residues like polychloride biphenyls and pyridines.

4. Concluding remarks

The new applications of supercritical fluids represent a favorable condition for including a technological plant in Latin America to process high-added value materials. The research and development of know-how activities performed in universities and research centers by the Latin-American scientists in the past years contribute to the implementation of supercritical technology in industry scale. The large biodiversity of raw materials found in the referred countries is a key-factor for becoming these future trends properly applicable.
